

SAN Services of MEN@NET: fast-acting, secure, high-performance

The advantages of a Storage Area Network (SAN) are obvious: Efficiency, flexibility, speed and above all disaster tolerance are key factors. Certainly, all network components should be compatible and communicate error-free with each other. The compatibility of different original equipment manufacturers (OEM) equipment is usually an issue before an upcoming expansion of the network. Nevertheless the performance of the SAN should be guaranteed, too. And that is where we come in.

The company specialises in network and performance management of high-speed data networks. We provide a comprehensive product portfolio for your SAN. We have developed our own monitoring software SAN RM and offer services, training, workshops as well as measurement and analysis equipment from popular vendors. Since 1999 we have been your reliable partner in this sector.

MEN@NET Consulting

For a company to operate successfully on the market, the IT structure must be stable. Knowledge of technologies and methods and their optimal application can have a decisive influence on the performance of operational data processing and thus on the entire process sequence. The more

complex the IT infrastructure is, the more versatile are the possible solutions. A third party neutral perspective can help to get a general overview. Whatever your topic or task, MEN@NET offers you the advice you need from technical experts. According to your questions and specifications, we can flexibly scrutinise your wishes and needs in the IT sector. We advise you exactly to the extent that is required and necessary. Certainly we are

independent of manufacturers. As to this you can quickly make a schedule of what is available in your business, what your business needs, and what kind of network and SAN solutions are best for you. Our know-how is based on many years of consulting and support of internationally operating corporations. The success of these corporations is also based on an effective and efficient network environment.

**Consulting**

A sustainable operational IT structure requires consistent planning. Special applications and hardware components require perfect coordination. Performance and security are essential components for high availability of data in a flexible organisation. You as the customer determine the order and we advise you accordingly. The service orientation of our technical experts guarantees you not only guidance but also practical support. This puts you in a position to quickly exploit potential, conserve resources and reduce costs in the long term.

Our Service - Your Benefit: MEN@NET Consulting in brief

- Flexible support according to the assignment of the tasks
- Advices in case of technology change or architecture modifications
- Comparison of different options
- Demonstrating effective and efficient solutions
- Consulting on cost reduction through optimised network and especially SAN structures
- Assistance for investment decisions
- Combination of economy and technical know-how

Our services for high-speed data networks**Health Check**

Manufacturer-independent analysis of the SAN environment.

**Review Meetings**

Workshops on a regular basis to stabilise the SAN.

**Remote Monitoring**

Continuous monitoring of the SAN by our experts.

**Troubleshooting**

Immediate fault isolation of urgent SAN problems.

**Pre-Deployment**

Proactive verification of technology changes in the SAN.

**Consulting**

Individual consulting for questions about complex SAN and networks
